IRISPowerscan™

Multi-channel capture made easy!

Scan, structure, sort, index, OCR, convert and export
all your documents

as fully searchable electronic files

to any business application

with no volume limitation

I.R.I.S.
A CANON COMPANY

Canon

A complete solution, from document capture through to business application data integration

Your company receives documents from a variety of channels and in multiple formats. Every single one of them holds crucial business information which needs to be integrated into your company's systems in order to ensure business continuity and kick-start further document processes and workflows.

With IRISPowerscan™ you can rely on a document capture solution that goes the extra mile to not only extract the business-critical information you need, but to also integrate with any of your business applications so that documents are automatically exported in the right format, along with reliable indexed data.

> Save valuable time, reduce manual processing errors, keep archiving costs and memory usage under control.
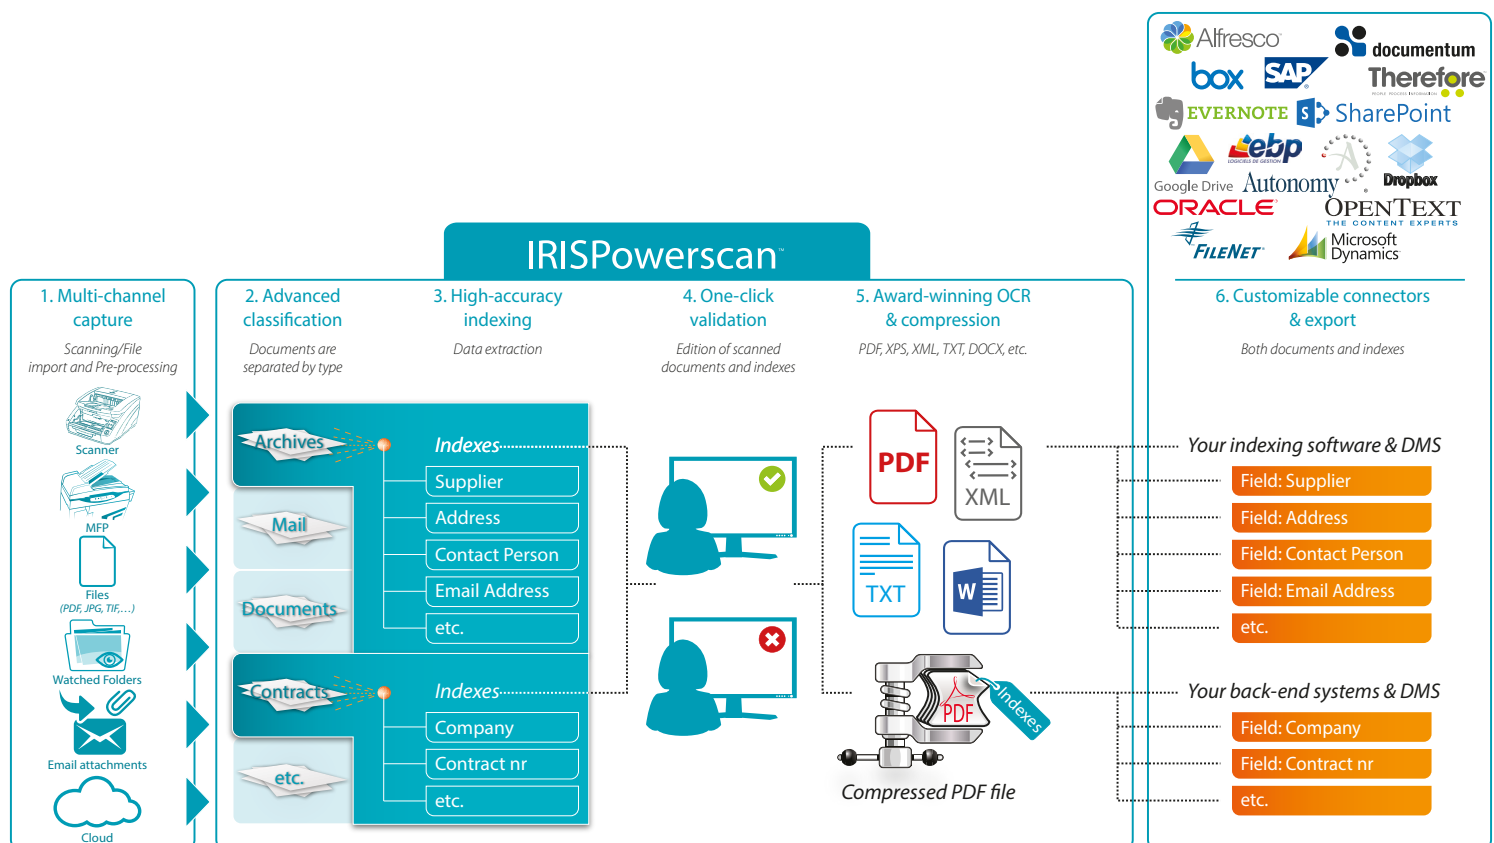

Multi-channel capture

Business critical information can arrive at your company though a variety of channels such as mail, files, email attachments. IRISPowerscan™ offers a single solution to address any of those: it supports most popular scanners (Canon®, Kodak, Fujitsu®, etc.); documents can be captured via an MFP and imported automatically using IRISPowerscan™'s watched folder feature; it can even import documents from Cloud services such as Box, Dropbox, OneDrive or SharePoint.

Powerful image adjustment tools help improve the quality of images by adjusting, contrast and brightness straightening skewed scans, removing unwanted pixels, splitting or merging images, and many more.

Advanced classification

IRISPowerscan™ is able to scan any document type. Of course, different documents require specific processing. This is why once documents have been scanned or imported, the first step is to determine their type so they can be processed accordingly. IRISPowerscan™ uses a variety of techniques to perform automatic classification of your incoming documents, such as barcodes, patch codes, OCR/ICR zones, and more.

IRISPowerscan™ even features a powerful layout recognition technology known as IRISFingerprint™, which is able to learn the appearance of your various documents and perform identification without the need for text, labels, barcodes or any other conventional method.

High-accuracy indexing

Now that documents have been identified, IRISPowerscan™ proceeds to extract the key information you need from them. A variety of recognition technologies are used to address any type of index you need: OCR, ICR, barcodes, patch codes, and more.

For instance, a contract might contain information such as company names, contract number, signatory names, amounts, and more.

One-click validation

IRISPowerscan™ uses powerful verification technologies to make sure the information captured on your input documents is 100% reliable before it is exported to your systems.

IRISPowerscan™ prompts the user with a series of tools and techniques to make sure their validation job is carried out as fast and easy as possible, such as drag&drop OCR, keyboard shortcuts, auto-zooming, etc.
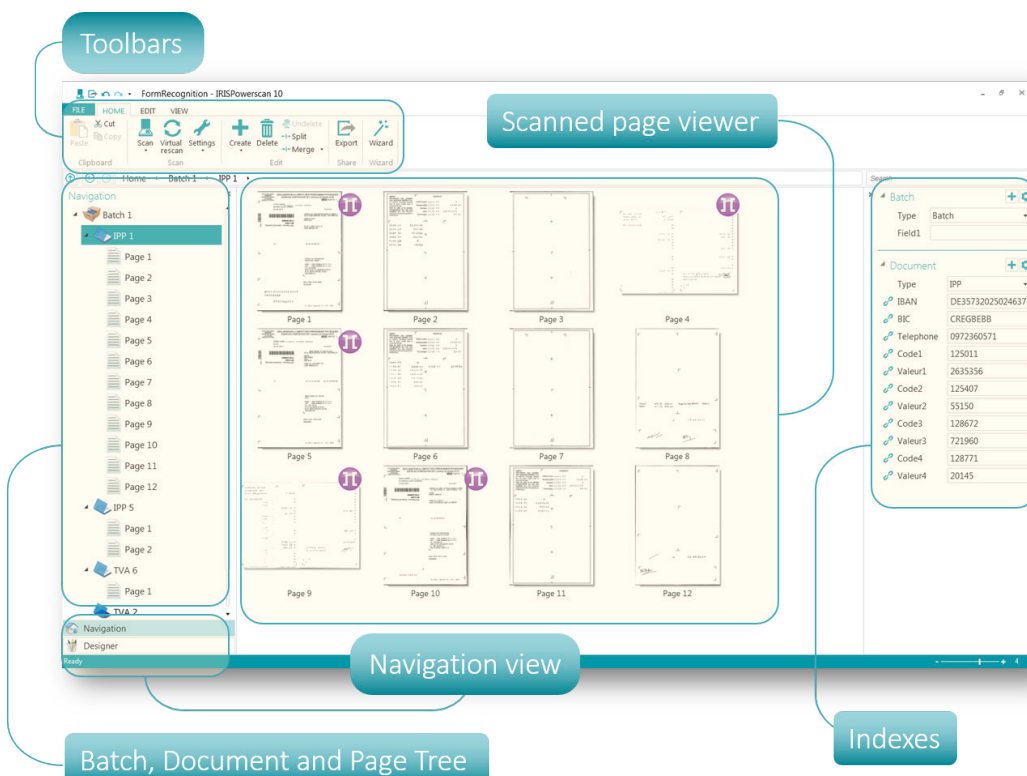

Award-winning OCR and Compression

IRISPowerscan™ is equipped with the latest generation of IRIS's award-winning OCR engine and is able to recognize text in over 130 languages. Once the full page has been recognized, the input document can be converted to a variety of formats in order to best suit your business requirements, such as PDF, PDF/A, hyper-compressed PDF or PDF/A, XPS, TXT, RTF, DOC, OpenDocument text, HTML, XML, WordML, SpreadsheetML, TIFF single or multi-page, BMP, JPEG, JPEG2000, PDF image, and more.

Export: a single, customizable connection platform

IRISPowerscan™ includes IRIS' extensive range of connection options allowing you to export captured content into your business critical workflow, such as your document folders, email, printers, third-party applications (Alfresco, Documentum, Sage, SharePoint, Therefore, FileNet, WorkSite, OpenText, IRISNext™, EBP, SAP, MS Dynamics, Oracle Financials, and more) or Cloud service (Box, Dropbox, OneDrive, Google Drive, Evernote, Therefore Online).

This unique connection platform can of course be customized to interface with any other third-party system through minimal configuration.

> Classify and index documents scanned with any scanner or MFP, or any file or even from the Cloud. Export both the documents and meta-data automatically to the right folder, library or category of your business application.

Add-on Modules

iHQC™ PDF hyper-compression
- Based on a page per year volume

Features
- IRISFingerprint™
- Central Management
- ISIS Driver for IRISPowerscan
- Background Processing
- Advanced ICR
- Advanced Barcode

Export (through IRISConnect™ - depending on your version: see table below for details)
- Toolbox (EBP, SAP, MS Dynamics, Oracle Financials….)
- IRISConnect for CMIS (Alfresco & Documentum…)
- IRISConnect for ODBC (Sage)
- IRISConnect for SharePoint
- IRISConnect for Therefore
- IRISConnect for FileNet
- IRISConnect for HP Autonomy Worksite
- IRISConnect for OpenText
- IRISConnect for Cloud (Box, Dropbox, OneDrive, Google Drive, Evernote)
