Readiris™ PDF

RELEASE NOTES

Build: 25.4.180.0 (Win) – 25.4.181.0 (MacOS)
Release Date: 2026-10-20

Quick Overview

This release introduces performance optimizations to reduce application startup time and enhances scanner dialog handling, improving visibility and allowing selection between vendor-native and alternative scan dialogs. It also brings multi user support on macOS.

System Requirements

Component	Requirement
Computer and processor	1.5 GHz processor or higher
Memory	4 GB RAM or higher
Available disk space	2 GB or higher
Operating System	1) Windows 10, Windows 11, 64-bit 2) MacOS 13, 14, 15, 26
Other	Internet connection

The system requirements shown are valid on the publication date of this manual.
More recent operating systems may require a software update.

Hardware Requirements

Readiris™ PDF uses all computer resources (CPU and GPU), so the more resources you have, the faster the application will run.
For **compatibility** with scanners, go to the **User Guide > Configure your scanner**.
Caution: small form factor PCs or virtual machines may not be compatible.

New Features

From 25.4.180-181.0:

- Updated the registration form for France to comply with CNIL data protection requirements.
- Added Software Bill of Materials (SBOM) generation support to improve software transparency and support security compliance initiatives.

Improvements

From 25.4.7-8.0:

1. **Application startup optimization**
   Reduced application startup time to under 10 seconds.
2. **Scanner dialog enhancements**
   a. The scanner dialog is now correctly started at the foreground level, preventing it from being hidden by the application UI with some scanners.
   b. Users can switch between the native vendor scan dialog and an alternative scanner dialog, enabling better compatibility and workflow customization.
3. **Multi User support on MacOS**
4. **Remove password function**

From 25.4.64-65.0:

1. Update of our .NET and IDE components to match latest cryptographic changes in MacOS and Windows
2. Now an email can be sent without entering a valid email in the configuration window.

From 25.4.180-181.0:

1. Update of .NET library
